

## **Affordable luxury – the new Sortimo T-BOXX**

**Sortimo's new T-BOXX is on its way to victory this autumn. The new style trendsetter complements Sortimo's range of cases and assumes the practical functions of the legendary Sortimo service case. It is the optimum companion in transparent form whenever you leave your mobile workshop.**

Autumn is going to be a transparent one! After the market launch of the S- and M-BOXXes, Sortimo has extended this successful product line by a new service case: the new T-BOXX. Its appearance is nothing if not trendy: a transparent lid ensures that the contents are highly visible, high-grade plastic materials make it particularly light in weight (empty weight 2.3 kg – a third less than the established and legendary steel-sheet service case), and its dimensions – 440 mm in width, 330 mm in depth and 82 mm in height – fit in perfectly with the Sortimo Globelyst System. The two spring-loaded latches also make for easy opening and reliable closing. The ergonomic handle nestles perfectly in your hand and makes sure that the case is comfortable to carry even over long distances.

### **New: order plus transparency**

The time-proven Sortimo plastic inset boxes can be located individually in the new T-BOXX. They provide virtually unlimited possibilities of storing small parts and spare parts so that everything is well-placed and available on site when you need it. These removable inset boxes engage securely in every position on the base or lid of the case and can thus be individually positioned. We call it "BOXX magic" – even extreme jolts and vibrations inside the vehicle or when carrying the case cannot disturb the contents – no tool or part detaches from its designated position.

### **Fits seamlessly into the Globelyst System**

The new T-BOXX would not be a Sortimo product if it didn't fit seamlessly into Sortimo's Globelyst System. The T-BOXX can be integrated into the system on special trays: it fits on the aluminium shelf of the well-known M-BOXX and can be stored securely in the case trays.

New and totally unique is the possibility of securing the T-BOXX on the front of the in-vehicle equipment modules or on the rear wing doors of a commercial vehicle by means of an optional adapter set!
