

Sortimo TOOLBACK for extending the cargo space – room to spare in a mini space

Smart on the outside – Sortimo Globelyst on the inside

Congested roads, hardly any parking spaces – that is the familiar daily hassle in cities and towns. We have been offering the optimum in-vehicle equipment for every requirement for over 30 years now. Sortimo TOOLBACK, the innovative cargo space extension developed jointly by Sortimo and Clever-Parts, turns even a Smart fortwo into a full-value customer service vehicle. The market leader from Zusmarshausen proves once again that market trends are recognised by our very own ideas factory at an early stage and translated into innovative solutions.

According to Fatih Yilmaz, the target group manager at Sortimo International, **"Innovation forté is a self-perpetuating competitive advantage! Our aim is to work out real solutions for the market and to offer our customers a significant increase in value. The Smart fortwo has established itself over the past years as an optimum advertising medium. And with the Sortimo TOOLBACK, we give the vehicle a real utility value in everyday life"**.

It couldn't be more practical. Clever-Parts in Wiernsheim, the inventor of TOOLBACK, **doubles the size** of the Smart's small boot. A "rucksack" if you like, made of glass-fibre-reinforced plastic that doesn't add to the weight, is simply "strapped on" instead of the tailgate. The newly gained space is large enough to install a complete in-vehicle equipment system in the half-pint vehicle. There can hardly be a vehicle that makes more sense in the city for emergency locksmiths and plumbers as well as electricians than the Smart equipped with the Sortimo TOOLBACK.

With the MaxiSpaceFrame, an aluminium shelving unit frame, the Sortimo Globelyst System offers maximum flexibility. There are three different variants available.

It is only Sortimo's policy of systematic lightweight construction that made it possible to realise the TOOLBACK in spite of the low load capacity of the Smart. And even though the small tool rucksack only weighs 14 kg, it is a very mighty midget indeed!
