The new SORTIMO Easy-Klick®

SORTIMO Easy-Klick®

Flexibility, quality and changing space requirements inside the vehicle – the one does not exclude the other. Evidence: Easy-Klick® by SORTIMO – an equipment block that you can take with you on site because it gives you room to move.

In March of this year the market leader from Zusmarshausen presented its new development at two different exhibitions in Munich and Frankfurt – **the mobile equipment block for the mobile workshop**. The product in question is a vehicle equipment block on rollers or slide rails which can be taken out of the vehicle within minutes. Very easily – i.e. simple clicking – the normally stationary equipment block is released from the anchoring point and can now be completely removed from the vehicle.

The answer to many different requirements

The new Easy-Klick® is the ideal answer to the many different requirements of the trade and service industries. Because by **quickly moving the equipment block** the use of the mobile workshop can be adjusted to the requirement of different sites or different transportation tasks. Another practical advantage is that tools can be “rolled” directly on site, i.e. no going back to the van to get another case or tool.

With bigger fleets, for example, Easy-Klick® exchange means less standstill time because it generates individual application possibilities. E.g. on Monday the vehicle can be used as a workshop, on Wednesday as a service van and on Friday as a vehicle for transporting payloads for a forwarding agent.

Today a workshop, tomorrow a recreational vehicle

One could almost call Easy-Klick® a functional piece of furniture that supports all applications. Because it either creates new working space in the mobile workshop for additional services or it makes room for leisure activities. The vision of “today business vehicle, tomorrow recreational vehicle” has become reality and SORTIMO once more meets the demand of more individual inside design.

The new Easy-Klick® change device is part of the revolutionary third in-vehicle equipment generation by SORTIMO: **SORTIMO Globelyst**. Based on the **Spaceframe Architecture** made of high-tensile aluminium, this Easy-Klick® change possibility ensures more flexibility and a wide variety of applications. **Independent of their configuration, the Easy-Klick® System can be attached to all equipment blocks.**

Based on the extremely positive response during the fairs, the way has been paved for series production. The **Sortimo Easy-Klick® System** is available as of September 2005.
