RESS RELEASE

**SORTIMO in-vehicle equipment – order = efficiency + safety**

## **Systemized Order in the Service Van**

**Spare parts, tools, components – if your place of work is a van, you know the importance of SORTIMO in-vehicle equipment.**

Sortimo in-vehicle equipment makes the difference in the van and very much contributes to your efficiency. It also makes sure that everything stays safe in place – even in case of an accident. Order paired with efficiency plus safety is a formula applying equally to service and workshop vehicles. In addition to standard equipment SORTIMO also offers a wide variety of special solutions for the different branches of industry.

### **SORTIMO Globelyst – flexible fitting possibilities**

Very much is demanded of today's in-vehicle equipment. One seeks the perfect balance between low weight and payload. To fulfil this requirement, SORTIMO introduced a new in-vehicle fitting system – Globelyst – at the 2004 IAA in Hanover. Without compromising on the required high level of safety, this **third generation of SORTIMO in-vehicle equipment** offers flexible and made-to-measure fitting possibilities for all vehicle models at a weight reduction of up to 30%.

### **Space Frame Architecture – Construction inspired by Nature**

The Space Frame enables us to reduce the mass of materials and offering weight savings without compromising strength. We've employed the principle of bracing found everywhere in nature to achieve the tough yet light weight construction of the Globelyst System.

In the words of SORTIMO Managing Director Reinhold Braun “Globelyst stands for **global System** to describe the universal variety of applications of the new vehicle equipment.” The new generation of in-vehicle fittings is combines a large number of different heights on a finely tuned 17 mm vertical increment to suit your needs as nearly as possible. Racks can follow the outline of the vehicle. Connection to the roof is possible and racks can be located over the wheel arches where these intrude on the run of racking.

SORTIMO Globelyst is the new and revolutionary in-vehicle equipment made by Sortimo. The **Space Frame Architecture** is made of high-tensile aluminium, i.e. less weight but no compromising on strength. It also means increased passive safety and better utilization of the payload. Technology and quality by the market leader – SORTIMO again sets the standard.
