

SOBOFLEX® – The non-slip SORTIMO flooring for maximum grip

Airbag at the front, SOBOFLEX® in the back

Whoever has to load a utility vehicle also has to think about protecting the loading area and the load itself. The basis for this has a name: **SOBOFLEX®**, a highly wear-resistant safety assembly floor which provides a firm and non-slip base for the goods being transported.

SOBOFLEX® – A secure investment in safety and protection

You know how it goes: the sales contract is signed and sealed and includes one or two optional extras, but the subject of flooring in the loading area has not yet been broached, and this is a careless omission. Because if the load is to be transported safely and securely and the loading space is to be protected, this issue is all-important. And SORTIMO has the answer: the **SOBOFLEX® safety assembly floor** with a whole volley of customer-oriented advantages such as:

- Simple installation of SORTIMO Globelyst units, which are simply bolted to the Soboflex floor
- No holes need to be drilled in the body of the vehicle, meaning no reduction of the vehicle resale value
- Pre-inserted nuts for additional lashing systems
- Vehicle entry edges protected with aluminium wear strips
- Quick installation thanks to the customised pre-cut shapes for any vehicle type
- Highly anti-slip Soboflex surface coating, even when wet
- Highly resistant to wear

And what makes SOBOFLEX flooring so special? The safety assembly floor consists of 9 layers of pure Nordic beechwood and is coated with polyolefin. The nuts inserted into the floor are also practical: lashing eyes can be connected up as necessary to keep bulky or loose objects secure and safe. Another advantage: SOBOFLEX is quick and easy to install. Because the multiplex panels are cut precisely to size to fit the vehicle in question, the panels are simply located in the vehicle. No holes need to be drilled and the body of the vehicle remains undamaged.

SOBOFLEX® – a decision you will not regret

Even when wet, the special composition of the Soboflex surface coating ensures optimum grip and a secure foothold in every direction. Not only is the load secure, but also the persons loading and unloading the goods. SOBOFLEX® remains skid-proof even under the most unfavourable conditions! It outstrips the wear-resistance value of conventional screen-printed plates 65 times over! And dirt is no longer a problem because the surface coating is so easy to clean!
